### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 14 May 2009 has been entered.

#### **Current Status**

1. Claims 1-6 are pending in the application.

#### **Priority**

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d).

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Smith et al., {Phosphorus mustards. 1-3 III. Bis(2-chloroethyl)methylphosphine oxide and bis(2-

Application/Control Number: 10/580,699 Page 3

Art Unit: 1621

benzoxyethyl)methylphosphine, JOURNAL OF MEDICINAL CHEMISTRY, 11(5), 1060-3}.

Smith et al. disclose applicant's claimed process for producing phosphonium borate compound (tri-*n*-butylphosphonium tetraphenylborate). See page 1063, column 2; paragraph 5.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Ayllon et al., {Proton Transfer I-3 in Aminocyclopentadienyl Ruthenium Hydride Complexes, ORGANOMETALLICS, 18(20), 3981-3990}.

Ayllon et al. disclose applicant's claimed process for producing phosphonium borate compound (tri-*n*-butylphosphonium tetraphenylborate). See page 3989, column 1; paragraph 3.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.

Art Unit: 1621

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al., {Phosphorus mustards. 1-3 III. Bis(2-chloroethyl)methylphosphine oxide and bis(2-benzoxyethyl)methylphosphine, JOURNAL OF MEDICINAL CHEMISTRY, 11(5), 1060-3} or Ayllon et al., {Proton Transfer I-3 in Aminocyclopentadienyl Ruthenium Hydride Complexes, ORGANOMETALLICS, 18(20), 3981-3990}.

Applicants claim a process for producing phosphonium borate compound; wherein all the variables are as defined in the claims;

# Determination of the scope and content of the prior art (M.P.E.P. §2141.01)

Smith et al. teach applicant's claimed process for producing phosphonium borate compound (tri-*n*-butylphosphonium tetraphenylborate). See page 1063, column 2; paragraph 5.

Ayllon et al. teach applicant's claimed process for producing phosphonium borate compound (tri-*n*-butylphosphonium tetraphenylborate). See page 3989, column 1; paragraph 3.

# Ascertainment of the difference between the prior art and the claims (M.P.E.P.. §2141.02)

Smith et al. and Ayllon et al. process for producing phosphonium borate compound differs from the instant claims in that Applicants claim a process that employ HCl and H<sub>2</sub>SO<sub>4</sub> as reagents while Smith et al. and Ayllon et al. teach a process that employed HCl as a reagent.

Application/Control Number: 10/580,699 Page 5

Art Unit: 1621

<u>Finding of prima facie obviousness--rational and motivation (M.P.E.P.. §2142-2143)</u>

The instantly claimed process for producing phosphonium borate compound would have been obvious to one of ordinary skill in view of the process taught by Smith et al. and Ayllon et al. because the references cited teach the use of inorganic acid.

One of ordinary skill in the art would have a reasonable expectation of success in practicing the instant invention by correlating the teachings of the references cited by evaluating different commercially available inorganic acids to prepare phosphonium borate compounds as desired. Said person would have been motivated to practice the teachings of the references cited because the references demonstrated the use of the phosphonium borate compounds in industrial applications. The instantly claimed invention would therefore have been obvious to one of ordinary skill in the art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chukwuma O. Nwaonicha whose telephone number is 571-272-2908. The examiner can normally be reached on Monday thru Friday, 8:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne (Bonnie) Eyler can be reached on 571-272-0871. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for
